Willkommen Welcome

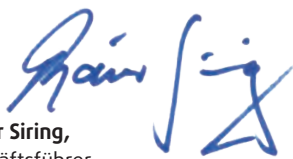

Sehr geehrter Kunde,

ich freue mich Ihnen unseren neuen komplett überarbeiteten Hauptkatalog über chirurgische Instrumente vorstellen zu dürfen. Bei der Auswahl der Produkte, sind wir mit größtmöglicher Sorgfalt bezüglich der Aktualität der Instrumente vorgegangen. Nun besteht die Möglichkeit sich die Instrumente selbst zusammen zu stellen, oder aber, Sie können sich von uns Instrumentensätze zusammenstellen lassen, die uns für Ihre jeweils spezifischen Aufgaben als geeignet scheinen. Für Fragen stehe ich und mein Team Ihnen gerne jederzeit zur Verfügung und freuen uns über jede Anfrage.

Dear customer,

I am very pleased to present you our, new completely revised main catalogue of surgical instruments. When selecting the products, we took extreme care to ensure that the instruments are up to date. It is possible to assemble the instruments sets yourself at your request, or to have us assemble sets of instruments that we judge to be suitable for your specific tasks. Please do not hesitate to contact myself or my Team for any help.

Rainer Siring,
Geschäftsführer

Der Teleskop-Laryngoskopspatel ist die Konsequenz aus den Erfahrungen mehrjähriger notärztlicher Tätigkeit. Die Notwendigkeit der Intubation ergibt sich nur bei einem kleinen Prozentsatz der Einsatzfälle. Dann muss sie jedoch schnell und sicher erfolgen können! Die bisherige Methode mit mehreren Laryngoskopspatelgrößen nimmt viel Volumen in Rettungskoffer ein und trägt erheblich zu dessen Gewicht bei.

Wird dem Notarzt bei der Intubation der falsche (insbesondere zu kleine) Laryngoskop angereicht, muss evtl. nach frustriertem Intubationsversuch, ein relativ zeitraubender Spatelwechsel erfolgen.

Jetzt besteht das Hauptrisiko für Hypoxämie und Aspiration für den Patienten!

Der Teleskop-Laryngoskopspatel erlaubt die sichere Intubation mit sofortiger Verstellmöglichkeit der Spatellänge durch den Notarzt. Sein Volumen- und Gewichtsanteil im Rettungskoffer ist deutlich geringer. Dies führt zur Steigerung der Einsatzfähigkeit des Rettungsteams bei der Boden-, See- und insbesondere aber auch bei der Luftrettung.

The Telescope Laryngoscope Blade is the consequence of the experiences of emergency doctor for years.

An intubation is only necessary at a small percentage of the cases of emergency. But then it has to be effected quickly and safe! The present method with various sizes of Laryngoscope blades needs many space in the rescue suitcase and it makes it very heavy. If the emergency doctor gets the wrong blade at the intubation (especially if the blade is too small) a change of blades has to be effected, probably after a futile trials of intubation which is very time consuming.

Now is the main risk for hypoxemia and aspiration for patient!

With the Telescope Laryngoscope Blade the emergency doctor is able to make a safe intubation with the possibility of an immediate adjustment of the length of the blade. The volume and the weight of the rescue suitcase is definitely lower. This aspect diate adjustment of the length of the blade. The volume and the weight of the rescue suitcase is definitely lower. This aspect leads to an increase of the capability of the rescue team on ground, at sea and especially in the air.

El Laringoscopio telescopico es la consecuencia de las experiencias de medicos de urgencias durante años.

Una intubación es sólo necesario en un pequeño porcentaje de los casos de emergencia. El método presente con varios tamaños de hojas de Laringoscopios necesita mucho espacio en la maleta de rescate y esto la hace muy pesada.

Si se le entrega al medico de urgencias la hoja incorrecta para la intubación (sobre todo si la hoja es demasiado pequeña) un cambio de hoja tiene que ser efectuado, probablemente tras un intento vano de intubación que requiere mucho tiempo.

Ahora es el riesgo principal para hipoxemia y aspiración para el paciente!

El Laringoscopio telescopico permite al medico de urgencias una intubación segura con la posibilidad de un ajuste inmediato de la longitud de la hoja. El volumen y el peso de la maleta de rescate son definitivamente inferiores. Este aspecto conduce a un aumento de la capacidad del equipo de rescate sobre la tierra, en el mar y sobre todo en el aire.

Il Laringoscopio telescopico è la conseguenza dalle esperienze di dottori di emergenza per anni. Una intubazione è solamente necessario ad una piccola percentuale dei casi di emergenza. Il metodo presente con le varie taglie delle lame di Laringoscopio ha bisogno di molto spazio nella valigia di liberazione e lo fa molto pesante. Se il dottore di emergenza trova la lama sbagliata all'intubazione (specialmente se la lama è troppo piccola) un cambio di lame doveva essere effettuato, probabilmente dopo un triale futile di intubazione che richiede molto tempo.

Ora è il rischio principale per hipoxemia e l'aspirazione per il paziente!

Col il Laringoscopio telescopico il dottore di emergenza è capace di fare un intubazione sicura con la possibilità di una rettifica immediata della lunghezza della lama. Il volume ed il peso della valigia di liberazione sono definitivamente più bassi. Questo aspetto conduce ad un aumento della capacità della squadra di soccorso su terra, a mare e specialmente nell'aria.
